

VITYARTHI PROJECT

DIGITAL LITERACY

REPORT FILE

NAME:- ASHI GUPTA

REGISTRATION NUMBER:- 25BCE10041

SUBMITTED TO:- DR. KANAN

DATE:- 30 MARCH 2026

TASK 1

I created my infographic using Canva, an easy-to-use online design tool that offers a variety of templates, icons, and customization options. My design focuses on key aspects of digital literacy, including what digital literacy means, useful digital tools for students, and safe internet practices. I structured the infographic in a visually organized way, using sections with icons and short points to make the information clear and engaging. It highlights how students can use tools like Google Docs and educational apps effectively, while also emphasizing the importance of online safety, such as protecting personal information and avoiding suspicious links. One interesting part of the process was selecting appropriate visuals and icons that matched each concept, as it helped make the content more appealing and easier to understand. However, I found it slightly difficult to balance the amount of information and design, as adding too much text made the infographic look cluttered. Overall, this task helped me improve both my digital design skills and my understanding of digital literacy concepts.

TASK 2

For my project, I chose three important platforms: LinkedIn, GitHub, and Kaggle, as they are highly useful for students in the field of technology and data science.

LinkedIn is a professional networking platform used to connect with industry experts, showcase achievements, and explore job or internship opportunities. I plan to regularly update my profile, share my projects, and build connections with professionals over the next four years.

GitHub is a platform used to store, manage, and collaborate on coding projects. It helps in building a strong portfolio by showcasing practical work. I will use GitHub to upload my academic and personal projects, improve my coding skills, and collaborate with others.

Kaggle is mainly used for data science, machine learning competitions, and datasets. It also provides notebooks and learning resources. I plan to practice regularly on Kaggle, participate in competitions, and strengthen my data analysis and AI skills.

Over the next four years, I aim to consistently use these platforms to build a strong professional presence, improve my technical skills, and prepare for future career opportunities.

Task 3

I used HackerRank as my primary platform to practice Python programming. On this platform, I solved a variety of coding problems ranging from basic syntax and data types to more advanced topics like loops, functions, and problem-solving techniques. It provided a structured way to improve my logical thinking and coding efficiency through hands-on practice and instant feedback.

Through HackerRank, I built a strong foundation in Python by regularly attempting challenges and learning from my mistakes. I also explored different problem categories such as algorithms and data structures, which helped me understand how to approach real-world coding problems systematically.

These tools will help me academically by improving my programming skills, which are essential for my AI and Machine Learning studies. Regular practice on HackerRank enhances my problem-solving ability, which is useful in exams, assignments, and projects. It also prepares me for coding interviews and competitive programming. Overall, using HackerRank supports my learning by making me more confident and efficient in writing code.

TASK 4

A situation where poor digital communication caused a problem is in online group projects. For example, one team member shared important instructions in a WhatsApp group, but the message was long and unclear. Some members misunderstood their roles, while others missed the message completely due to too many chats. As a result, the project submission was incomplete and the group received low marks.

This issue could have been avoided with better communication practices. The team member should have shared clear, short instructions using bullet points and highlighted deadlines. Important messages could also be pinned or shared on a common platform like Google Docs. Additionally, all members should have acknowledged the message and clarified any doubts in time. Clear and organized digital communication helps avoid confusion and improves teamwork.

TASK 5

What surprised me most while researching digital literacy and its prevention was how common and sophisticated online threats have become. I learned that even simple actions like clicking on unknown links, using weak passwords, or sharing personal information casually can lead to serious risks such as phishing or identity theft. I was also surprised to see how many people are unaware of basic safety practices despite using the internet daily.

As a result, one habit I will personally change is improving my password security and online verification practices. I will start using strong, unique passwords for different accounts and enable two-factor authentication wherever possible. Additionally, I will be more cautious before clicking links or sharing information online to ensure my digital safety.
